

The Final Push

Data Boot Camp
Lesson 23.1

Final Project Requirements

Do What Your Heart Commands

Final Project Requirements: Demystifying ML

01

Find a problem worth solving, analyzing, or visualizing.

02

Use ML in the context of technologies learned.

03

You must use: Scikit-Learn and/or another machine learning library.

04

You must use at least four of the below:

Python Pandas

HTML/CSS/Bootstrap

JavaScript Leaflet

Google Cloud SQL

Python Matplotlib

JavaScript Plotly

SQL Database

Amazon AWS

Python Flask

JavaScript D3.js

MongoDB Database

Tableau

Final Project Requirements: Demystifying ML

05

Prepare a 10-minute data deep-dive or infrastructure walkthrough that shows machine learning in the context of what we've already learned.

06

Example projects:

- Create a front-end interface that maps to an API to “smarten” the algorithm.
- Perform a deep dive of existing data using machine learning.
- Create a visualization that continues to learn where clusters lie based on ML.
(Use D3 or Plotly to change the visualization.)
- Create an idea with mock data that simulates how machine learning might be used.
- Create an analysis of existing data to make a prediction, classification, or regression.

The key is to **show** the value of what you know.

Final Project

Forming Teams:

You can choose your team.

Teams should generally have 3 to 4 people.

Work with students from either section (M/W) or (T/Th).

You can start as early as when you form your team.
